“The Institute of Human Virology has become a leader in the field of virology in an unprecedented amount of time. This is due in large part to the Institute’s multidisciplinary approach to virology. Its epidemiology, clinical testing and patient care wings not only allow staff to devote their time where it is most appropriate, but also engender cross-collaboration among a wide variety of researchers and clinicians housed within the facility.”

“The IHV’s primary accomplishment is its status as a successful experiment that proves that across-the-board research can be conducted under one roof. IHV proves that intense heterogeneity of staff and of collaboration produces remarkable results. IHV has become the model for future programs.”

Edmund Tramont

*Director of the National Institute of Allergy and Infectious Disease’s AIDS Division*
